X-CHARGE® - The Versatile Processing Solution

X-Charge® Integrated Credit Card Processing Software, developed by Accelerated Payment Technologies™, Inc. is a valuable and cost effective solution that is integrated directly into point-of-sale software or utilized on a stand-alone basis. This easy-to-use solution offers merchants a variety of processing benefits:

CURRENT WITH THE LATEST TECHNOLOGY - Other products issue security updates that require merchants to purchase or lease new terminals in order to remain current with technology. Failure to update may cost merchants higher processing costs. X-Charge software stays in pace with these new technologies and updates are automatically provided to users, allowing merchants to remain current and avoid higher processing costs due to outdated technology.

ELIMINATE ERROR AND FRAUD - Using our software solutions and X-Charge requires no re-keying of sales amounts. The amount tendered in the program is exactly what is authorized via X-Charge. This integration virtually eliminates the chance for fraud or error!

STREAMLINE PROCESSES - Every credit card transaction has a corresponding transaction entry within X-Charge, further reducing chances for errors.

EXTRA COUNTER SPACE - X-Charge software runs directly on your POS workstation, replacing stand-alone bank terminals, reducing the clutter at the checkout counter and providing more valuable space for selling.

SPEED UP PAYMENT PROCESSING - 2 to 3 seconds using high speed Internet - credit card transactions are authorized in less than 15 seconds via modem.

EASY TO LEARN/SIMPLE TO USE - Your clerks simply tender the sale normally and swipe the customer's credit card - X-Charge does the rest! Your clerks do not need to move from the POS station, to the stand-alone terminal, back to the POS station. Using X-Charge easily allows multi-user processing, turning any computer into a payment processing station.

ENHANCED PROFESSIONAL IMAGE - No longer will you have to issue a POS System invoice and a separate credit card invoice. With electronic signature capture, you will have one streamlined walk-out invoice.

ELIMINATE DEDICATED PHONE LINES - X-Charge allows you to process via high speed Internet, eliminating phone lines that are required with stand-alone terminals.

ROBUST REPORTING - X-Charge can print meaningful management reports, allowing daily, weekly, monthly, yearly and user-defined time period reporting. This results in much more information than stand-alone credit card terminals can provide!

PCI COMPLIANT - Protect your business and your customers! New PCI regulations and standards are now required of all merchants of all sizes. These standards focus on how to secure and protect card data. X-Charge is a PA-DSS Validated Payment Application and provides world class technical and customer support. Give your customers peace of mind with secure payment transactions using X-Charge.
